Art Unit: 2652

1. Applicant's election without traverse of the species of figure 3 in Paper No. 5 of 4/23/04 is acknowledged.
2. Applicant states that claims 1 and 2 read on the elected species. The Examiner does not agree. Claim 2 recites that the shape involved is a step. This reads on the non-elected species of figure 5. The elected species shows the shape to be a linear incline. The Examiner believes that claims 1, 3-7, 16, and 17 read on the elected species of figure 3.
3. Claims 2, 8-15, and 18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 5.
4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
5. Claims 1, 3, 6, 7, 16, and 17 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by SANTINI (6,557,242).

Art Unit: 2652

Note especially figures 2, 3, 14, 19a, and 19c. SANTINI shows a disk drive with a merged R/W head (40/200) mounted on the trailing end of a slider (42). Figures 19a and 19c show embodiments of the pole pieces that have linear inclined (re claim 3) shaped portions outside of the "magnetic functional portion" (defined in the specification as the transducing gap area) to "more retreat from the recording medium than the magnetic functional portion" so that the magnetic functional portion is nearer to the medium.

There is a protective layer (128) covering the gap area of the head (re claims 6 and 7).

Note that these claims do not specify the exact layers constituting the head, and which of those layers are shaped to be recessed from the ABS. These claims read on virtually any head that has a wider portion remote from the ABS.

6. Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
